PROFESSIONAL SUMMARY

Junior Full-Stack Developer with a Bachelor's degree in IT Systems Development and 6 months of commercial web development experience. Experienced in building full-stack applications using .NET, Next.js and TypeScript. Strong practical experience with microservice architecture, RESTful APIs, authentication, databases, message brokers and containerized applications.

EXPERIENCE

AlphaCRC Web Development Intern – Development Team

- Jan 2025 • Developed internal web-based tools for organizing and managing the work of development processes.
- • Worked with Node.js, React and MongoDB.
- Jun 2025 • Participated in code reviews and testing throughout the development lifecycle.
- Worked within an established professional software development workflow.

TECHNICAL SKILLS

Frontend:

React, Next.js, Tailwind CSS

Backend:

.NET, ASP.NET Core, RESTful Web APIs, Entity Framework Core, JWT Authentication, Node.js

Databases:

MongoDB, Microsoft SQL Server, PostgreSQL, Redis

Architecture & Infrastructure:

Microservices, RabbitMQ, Docker, Github Actions

Bachelor's Degree – IT Systems Development

PET PROJECTS

GamesFinder

[Github Frontend](#)

[Github Backend](#)

[Github Identity](#)

A microservice-based application for aggregating game offers from multiple sources and presenting them through a searchable and sortable web interface.

- **Architecture:** designed and implemented a microservice architecture consisting of authentication server, backend orchestrator, workers and frontend.
- **Backend:** developed the ASP.NET Core REST API responsible for task orchestration, result aggregation and data management.
- **Authentication:** implemented JWT-based authentication and user management.
- **Workers:** developed independent TypeScript workers for collecting game and offer data from external sources.
- **Infrastructure:** implemented RabbitMQ for task distribution and Redis for intermediate result storage.
- **Data:** used MongoDB for products data and Microsoft SQL Server for user authentication data.

.NET, ASP.NET Core, EF Core, Next.js, React, TypeScript, Tailwind CSS, MongoDB, Microsoft SQL Server, Redis DB, RabbitMQ, Microservices, REST API

MediaDownloader [Github](#)

A portable Windows application providing a graphical interface for yt-dlp, allowing users to download media from supported online sources using a URL.

- Designed and implemented a portable Windows desktop application independently.
- Developed a WPF host application using WebView2 to display the React frontend and manage the .NET backend process.
- Developed the React frontend and .NET backend serving as an interface between the UI and yt-dlp.
- Integrated yt-dlp for media extraction and downloading from user-provided URLs.

.NET, WPF, WebView2, React, TypeScript, yt-dlp
